

# embassy-futures

An [Embassy](#) project.

Utilities for working with futures, compatible with `no_std` and not using `alloc`.

Optimized for code size,  
ideal for embedded systems.

- Future combinators, like `join` and `select`
- Utilities to use `async` without a fully fledged executor: `block_on` and `yield_now`.

## Interoperability

Futures from this crate can run on any executor.
