Both modes support with and without additional CRC.
Currently only `Generic` SPI with or without CRC is supported.

NOTE: SPI Mode is selected by the hardware pins `SPI_CFG0` and `SPI_CFG1`. Software can't detect nor change the mode.

Hardware

- Tested on `Analog Devices EVAL-ADIN1110EBZ` with an `STM32L4S5QII3P`, see `spe_adin1110_http_server` for an example.

- `SparkFun MicroMod Single Pair Ethernet Function Board` or `SparkFun MicroMod Single Pair Ethernet Kit (End Of Life)`, supporting multiple microcontrollers. **Make sure to check if it's a microcontroller that is supported by Embassy!**
